How to Create QR Codes with Google Docs (or any URL really):
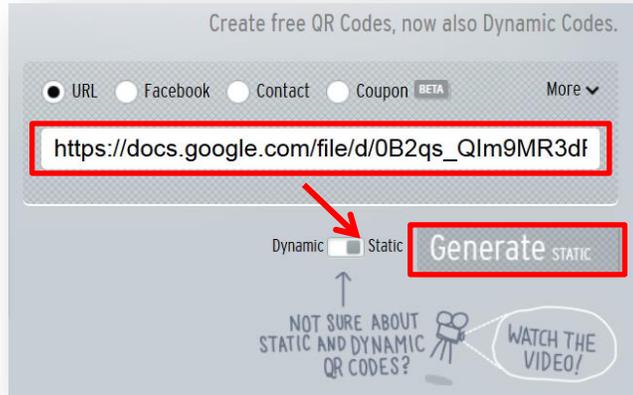

What is a QR Code?	http://www.youtube.com/watch?v=zZXCt1Ud_zE
1) Login to your GoogleDrive. *Tip:* Skip to *Step 8* to use a link from YouTube, Vimeo, or **ANY** other website address in the QR code.	http://drive.google.com
2) Upload a file and select the file(s) you would like to have accessible in your drive. 3) Once uploaded you should see it in your document list. Open the document in Google Drive.	
4) Click on Share in the upper right hand corner. You can also share an entire folder. *Tip:* If you hover over "Share" you will see a quick view of who has access to the document(s). 5) An option box will appear. Now you can edit the sharing options by clicking on Change to edit access. 6) Select that anyone with the link can view, then save. That way you won't have people editing the documents, and it is still private to only those with whom you share the link. You should see this change automatically in your Share Settings after you save. 7) Copy the link to share before you select Done so that you can use this to link your QR code.	
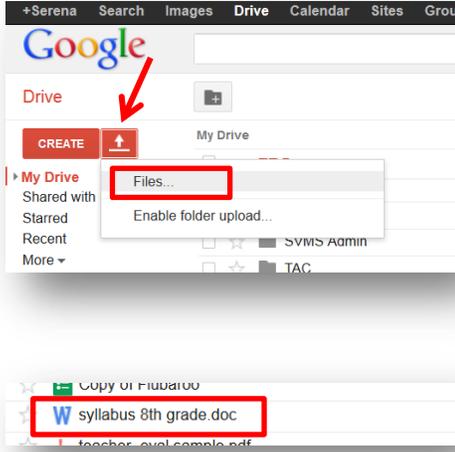

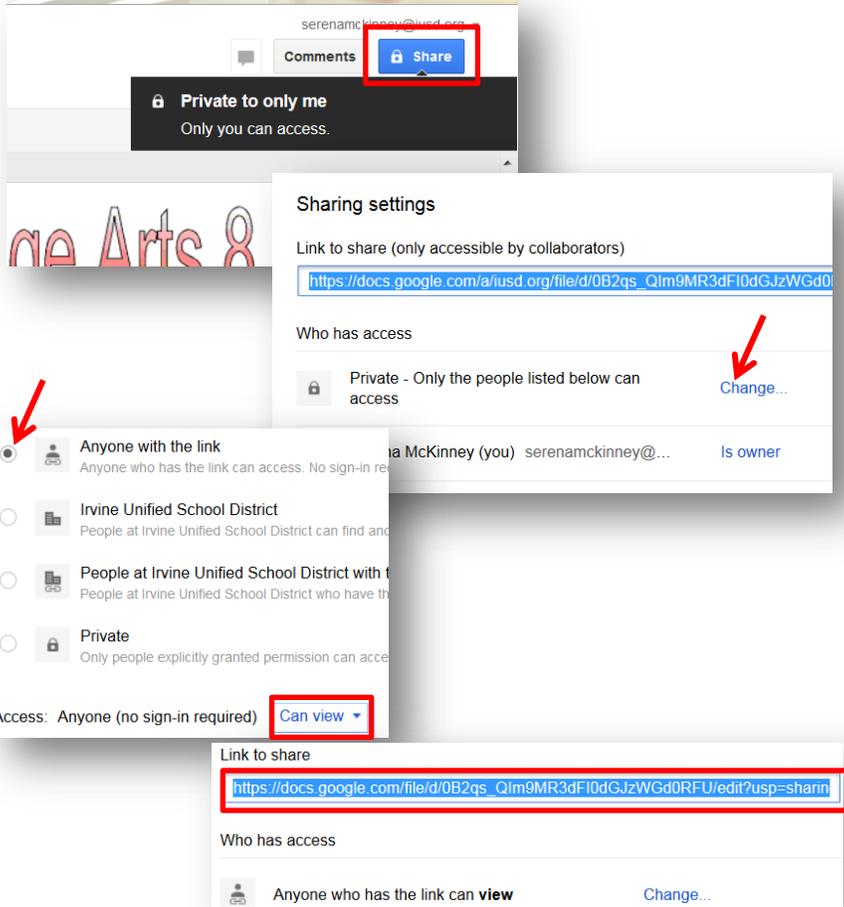

8) There are many free QR code creators (do a quick Google search), but this is a favorite.	http://qrcode.kaywa.com
9) Paste the link from your shared GoogleDoc (or any URL) into the URL box on the website. 10) Switch to static- unlimited and free, however not trackable or editable later. *If you are interested in more about dynamic vs. static codes, watch their quick video.* 11) Select Generate Static.	Create free QR Codes, now also Dynamic Codes. ○ URL ○ Facebook ○ Contact ○ Coupon BETA More ⌄ https://docs.google.com/file/d/0B2qs_QIm9MR3dF Dynamic ▢ Static Generate STATIC NOT SURE ABOUT STATIC AND DYNAMIC QR CODES? WATCH THE VIDEO!
12) Now you have generated a QR code. You are welcome to try to scan this sample. 13) You can copy and paste this into presentations, documents, or print it to stick on walls, windows or doors for easy scanning access. 14) A link is also created for you to embed it into a blog or website.	
Tip: You could also paste the link from any YouTube, Vimeo, website or your own class website address in the QR code generator for students or parents to access at any time. Remember though, anyone with the QR code has access to the link.	**Want more ideas and resources?** http://www.edutopia.org/blog/QR-codes-teaching-andrew-miller
